Small E-commerce Management

Candidate Task

TIME ALLOCATION: 3 DAYS

Submission Deadline : 11 Nov , 2026

1. Task Overview

Develop a small e-commerce management system that allows administrators to manage shops and products, while shop owners can manage their shop's product listings using a shared product catalog.

The application should support products created by both administrators and shop owners. Products added to the shared catalog should be available for other shop owners to select and list in their own shops.

2. Functional Requirements

Admin Panel

- Admin authentication.
- Shop management (CRUD).
- Product management (CRUD).
- Create and manage shop owner accounts.

Shop Management

- Shop owners can browse the shared product catalog and add products to their shops.
- Products created by the admin or other shop owners should be available in the shared catalog.
- Shop owners can create their own products, which should also become available in the shared catalog.
- Shop owners can set or modify product prices, details, and thumbnails for their own shops.

Customer View

- Customers should only see products assigned to a shop.
- Display shop-specific product information, prices, and thumbnails.
- Products that are not assigned to any shop must not be visible to customers.

3. Submission Requirements

1. Once completed, share the public GitHub repository URL with us.
2. The repository must include a README.md file with clear, step-by-step instructions for setting up and running the project.
3. Include all necessary configuration examples, database migrations, seeders, and other setup requirements.
4. The project must be runnable from a fresh setup by following the README instructions.

4. Important Notice

- The submitted project must be functional.
- We will clone and run your project to evaluate it.
- If we are unable to set up and run the project successfully by following your instructions, the submission will be considered a failure.
- Ensure that all required code and resources are committed to the public repository.

5. Submission

Share your public GitHub repository URL once the task is complete.
